

# File Guide for iOS (Windows PC)

## Pushing to the Carloudy

1. Turn the Carloudy on and connect it to the PC using a micro-USB to USB Type A cable.

2. Open **"This PC"**, and you will see **"Carloudy\_One"**  showing up.

3. Open **"Carloudy\_One"** and open **"Internal storage"**.

4. Under **"Internal storage"**, create a folder named by your **id**, which was generated by the Carloudy App Store for you. **id** should be all lower cases.

5. Under the folder you just created, put all your pictures under it. Name them by the signal you sent from your iPhone to the Carloudy with the file extension name as **".png"**. (i.e. **"zca200563030"** signal uses picture **"a2.png"**)

**ALL CHARACTERS MUST BE lower cases. ONLY **".png"** picture files will work.**
